

Intent UnderstandingSavedA

Requirement

Audit Blond Hair recall for people with facial hair in general, eyeglasses, something worn on the head, and a subtle lower-face visual balance. Treat facial hair as a broad visual concept that may cover several related beard or mustache styles rather than one specific attribute. I am uncertain whether "subtle lower-face visual balance" refers to face shape, cheek structure, chin fullness, nose shape, or a beard-related cue, so preserve plausible alternatives for review. Prioritize facial hair first; give eyeglasses and headwear equal second priority; place the uncertain lower-face concept third. Exclude youthful-looking faces, blurry images, and people wearing lipstick. Also consider a professional or formal-looking presentation if the dataset contains an appropriate attribute; otherwise leave that phrase unmatched. Use recall as the audit metric.
