Overall mechanism

Sign and trade salary increase cap

Tracks the annual salary increase limit for sign-and-trade contracts, which is 5% of first-year salary, and invalidates contracts exceeding this cap.

Skill content

Identify the contract as a sign-and-trade under Article VII, Section 8(e) (1). For such contracts, the annual increase limit is 5% of the first-year salary, as specified in Section 5(a) (1), not the general 8% rule. Compute the first-year salary and then calculate the maximum allowed annual increase as 5% of that amount. For each subsequent year, compare the actual dollar increase from the previous year's salary to this fixed limit. If any annual increase exceeds the limit, the contract is invalid. Do not assume that a stated percentage increase per year automatically complies; always verify the actual dollar increase against the 5% cap. Also, note that the signing team (the prior team) is responsible for the violation, not just the acquiring team's cap room.

Patch #1Skill V1

Recorded assessment

Applicability

Source patch

Applies to any Qualifying Veteran Free Agent re-signing with his Prior Team.

Skill

Applies specifically to **sign-and-trade** contracts for a Qualifying Veteran Free Agent re-signing with his Prior Team and then traded.

Original text 2

Rationale

Select

Original text

Source patch

When auditing a contract for a Qualifying Veteran Free Agent re-signing with his Prior Team

Procedure

Skill

particularly when the contract is for a Qualifying Veteran Free Agent re-signing with his Prior Team and then traded.

Applicability

Procedure

Source patch

Compute maximum annual increase as **8%** of first-year salary and verify each year's actual increase does not exceed this fixed amount.

Skill

Identify as **sign-and-trade**, apply **5%** annual increase cap on first-year salary, verify actual dollar increases against cap.

Original text 2

Rationale

Select

Rationale · review required

The source repair uses 8% for the general re-signing case, while the skill uses 5% for sign-and-trade. Since the source case is not a sign-and-trade, the skill's mechanism omits the applicable 8% branch.

The skill preserves the general operation (compute cap and compare) but implements a different applicability branch (5% for sign-and-trade) instead of the 8% branch that applies to the source case. Thus, the shared operation is preserved but the source branch is omitted.

Expected effect

Source patch

If any annual increase exceeds the **8%** cap, the operation is illegal.

Skill

If any annual increase exceeds the **5%** cap, the contract is invalid; the signing team is responsible for the violation.

Original text 2

Rationale

Select

Boundary

Source patch

Do not assume a stated percentage increase automatically complies; compare actual dollar increase to the fixed percentage of first-year salary.

Skill

Do not apply when the contract is not a sign-and-trade; general **8%** rule may apply instead.

Keep

Veteran re-signing raise cap

Veteran re-signing raise cap

Revision intent

Preserve the general 8% annual-increase rule for veteran re-signings. Apply the 5% exception only after confirming a sign-and-trade. Keep the fixed first-year salary basis and the signing-team responsibility check.
