

Education

Nanjing University

Sep 2023 – present

B.Eng. in Intelligent Software Engineering (expected Jun 2027) | **Average:** 88.4/100

School of Intelligent Software and Engineering

Research Interests

AI systems that continually improve from data, experience, and human feedback.

Data-centric AI • **Self-improving agents and continual learning** • **Human–AI interaction**

Research Experience

The Hong Kong University of Science and Technology (Guangzhou)

Aug – Oct 2026

Visiting Research Student | Research with Prof. Weikai Yang

Nanjing University, iMATE Lab

Mar 2025 – present

Research Assistant | Advisor: Prof. Ke Xu; collaborator: Dr. Wenchao Li

School of Intelligence Science and Technology

Research and Publications

SliceTune: Supporting Interactive Intent-Guided Slice Finding for Model Validation

First author; research lead | CHI 2027 submission, under review

- Designed and built **intent-guided failure-slice discovery**; led evaluation with image, audio, and text case studies, a controlled user study, and expert interviews.

SkillContour: Steering Agent Skill Consolidation with Behavioral Evidence

First author; research lead | CHI 2027 submission, under review

- Built an **evidence-linked skill refinement workbench**; led user and task evaluations showing stronger diagnostic support and higher agent accuracy than automatic consolidation and text-based review.

SkillCommit: Evolving Agent Skills through Behaviorally Validated Scope Expansion

Yu He, Weikai Yang.

First author; research lead | AAAI 2027 submission, under review | [arXiv 2026](#)

- Designed **replay-validated skill consolidation**, improving rule-based, legal, and abstract reasoning without parameter updates; demonstrated transfer across model sizes and families.

NetworkCanvas: Supporting Progressive Network Visualization Exploration via Adaptive Recommendations

Wenchao Li, Yuewen Gao, Yu He, Cong Zhu, Ke Xu.

CHI 2026 | Published | Project: Mar – Sep 2025

- Implemented **visualization and feedback components** for adaptive network exploration and branching histories; contributed to data integration, figures, and study documentation.

MSSR: Memory-Aware Adaptive Replay for Continual LLM Fine-Tuning

Yiyang Lu, Yu He, Jianlong Chen, Hongyuan Zha.

[arXiv preprint, 2026](#) | Project: Aug 2025 – Jan 2026

- Modeled **sample-level knowledge retention** and implemented adaptive replay scheduling; evaluated continual fine-tuning, with gains over replay baselines, especially in reasoning.

Selected Honors and Awards

Nanjing University People's Scholarship

Nov 2025

Meritorious Winner, Mathematical Contest in Modeling (COMAP)

May 2025

National Third Prize, China Collegiate Innovation and Invention Competition

Dec 2024
